### Methodology

WPAi selected a random sample of registered voters from the Wyoming voter file using Registration Based sampling (RBS). WPAi conducted a poll of n=518 registered voters in Wyoming. Data were collected via live callers and text messages between February 22-25, 2023, 24% of interviews were conducted via landline, 38% interviews were conducted via cellphones and 38% via SMS.

The sample for this survey was stratified based on geography, age, gender, partisanship, and ethnicity. This methodology allows us to avoid post-survey “weighting” which can reduce the reliability of survey results. The survey has a margin of error of  $\pm 4.3\%$  at the 95% confidence level.
